

SECTION 4.0 BITUMINOUS CONCRETE PAVEMENTS

All asphalt pavements shall comply with Division 6 of the NCDOT Standard Specifications.

The Contractor shall be responsible for the erection and maintenance of all barricades, signs or other protective devices as may be necessary to insure the safety and welfare of the public. Where work will require asphalt trucks to transit existing streets to access the site, the contractor shall spread sand or other fine aggregate at the entrance to the site to minimize the transfer of asphalt emulsion (tack) onto the existing roads.

Any intermediate course material (I-19.0) placed before October 15th shall be covered on or as soon as practicable after October 15th with either surface material (S(f)-9.5) or sand asphalt mix (F-1) to at least a minimum thickness for the material selected. Failure to cover intermediate layers shall subject those areas to further testing at the Developer/Contractor's expense and possible rejection by the City.
